CI Feedback Training

Learn to iterate on CI and LLMaJ feedback to get your task passing all checks.

Video Tutorial

CI Feedback Training

Practice Notebook

Download the Jupyter notebook for hands-on practice:

What You'll Learn

- Understanding CI check output
- Interpreting LLMaJ feedback
- Iterating on failures efficiently
- Common patterns and fixes

CI Iteration Workflow

 Copy

```
Run checks → Identify failures → Fix issues → Re-run → Repeat
```

Step 1: Run All Checks

BASH Copy

```
harbor tasks check <task-folder> -m openai/@openai/gpt-5.5
```

Step 2: Review Output

 Copy

CI Checks:

- ✓ pinned_dependencies
- x check_task_absolute_path
- ✓ validate_task_fields

LLMaJ Checks:

- ✓ behavior_in_tests
- x informative_test_docstrings
- ✓ anti_cheating_measures

2 checks failed

Step 3: Fix One Issue at a Time

Focus on one failure at a time. The error message will tell you exactly what's wrong:

 Copy

```
x check_task_absolute_path  
  Line 3: "Edit config/settings.json"  
  Use absolute path: /app/config/settings.json
```

For detailed fix instructions: See [CI Checks Reference](#) and [LLMaJ Checks Reference](#)

Step 4: Re-run and Verify

BASH

 Copy

```
harbor tasks check <task-folder> -m openai/@openai/gpt-5.5
```

Step 5: Repeat

Continue fixing issues one at a time until all checks pass.

Understanding Error Messages

Error messages are designed to be helpful. They typically include:

- **Which check failed** (e.g., `check_task_absolute_path`)
- **Where the issue is** (file and line number)
- **What's wrong** (specific problem description)
- **How to fix it** (suggestion or requirement)

Read the error message carefully—it tells you exactly what needs to be fixed.

Tips for Efficient Iteration

1. **Fix easy issues first** — Start with CI checks (syntax/structure) before LLMaJ (quality)
2. **Run locally before submitting** — Saves time and helps you catch issues early
3. **Read error messages carefully** — They tell you exactly what's wrong and often how to fix it
4. **One fix at a time** — Easier to track what worked and debug if something breaks
5. **Use the reference guides** — [CI Checks Reference](#) and [LLMaJ Checks Reference](#) have detailed explanations for each check

Checklist Before Final Submission

- ☐ All CI checks pass
- ☐ All LLMaJ checks pass
- ☐ Oracle agent passes
- ☐ Real agents tested (difficulty verified)
- ☐ Code reviewed for quality
