

⚠ Please do not reach out to reviewers directly; messaging them will not speed up your review.

Snorkel Terminal-Bench CLI

The `stb` command-line tool provides an end-to-end interface for creating, testing, submitting, and reviewing Terminal-Bench tasks.

Installation

Prerequisites

- [Docker](#) installed and running
- [uv](#) package manager

Install uv

BASH

 Copy

```
curl -Lsf https://astral.sh/uv/install.sh | sh
```

Install stb

BASH

 Copy

```
uv tool install snorkelai-stb --find-links https://snorkel-python-w
```

The `stb` command will be available globally (restart your terminal if needed).

Verify Installation

Check the version and available commands:

BASH

 Copy

```
stb --version  
stb --help
```

Getting Started

Authentication

BASH

 Copy

```
stb login
```

This opens the Experts platform and displays the API key generation dialog. Click "Generate Key", copy the key, and paste it into your terminal.

AI Credentials

Refresh AI credentials if exhausted or expired:

BASH

 Copy

```
stb keys refresh
```

View current credentials:

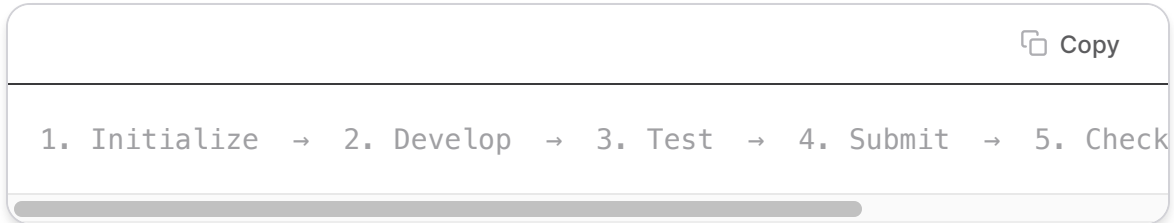

BASH

 Copy

```
stb keys show
```

Task Submission Workflow

Overview

1. Initialize Task

First, find your assigned project:

BASH Copy

```
stb projects list
```

This shows your projects with names, IDs, and assignment status for each role (Submitter, Reviewer, Adjudication):

- **active:** You are assigned and the project is open
- **inactive:** You are assigned but the project is closed
- **unassigned:** You are not assigned to this role (contact admin to request assignment)

Create a new task folder:

BASH Copy

```
stb init my-task-name -p PROJECT_ID -t TEMPLATE_NAME
```

You can use either the project name or UUID. If a project has only one template, `-t` is optional.

BASH Copy

```
# Using project name
stb init my-task-name -p "Terminus-2nd-Edition" -t base

# Using project UUID
stb init my-task-name -p bfe79c33-8ab0-4061-9849-08d3207c9927 -t mi
```

For non-milestone templates (e.g. `-t base`), this creates a folder with `instruction.md`, `task.toml`, `environment/Dockerfile`, `solution/solve.sh`, and `tests/test.sh`. See [Task Components](#) for details.

Note: The `-t milestone` template uses the multi-step format described in the [Milestones page](#) — each milestone is a self-contained subdirectory under `steps/`. If you generate a milestone scaffold and it produces the older root-level `solveN.sh` / `test_mN.py` / `milestone_x.md` layout instead, your `stb` CLI is out of date — upgrade it before proceeding.

2. Develop Your Task

Edit the generated files:

- `instruction.md` - Task instructions ([Task Components](#))
- `task.toml` - Metadata and configuration ([Task Components](#))
- `environment/Dockerfile` - Environment setup ([Docker Environment](#))
- `solution/solve.sh` - Oracle solution ([Writing Oracle Solution](#))
- `tests/test.sh` - Verification tests ([Writing Tests](#))

3. Test Locally

Test your solution interactively:

BASH

 Copy

```
stb harbor tasks start-env -p ./my-task-name -i
```

Run oracle agent:

BASH Copy

```
stb harbor run -a oracle -p ./my-task-name
```

Test with real agents:

BASH Copy

```
# GPT-5.5
stb harbor run -m @openai/gpt-5.5 -p ./my-task-name

# Claude Opus 4.8
stb harbor run -m @anthropic/claude-opus-4-8 -p ./my-task-name
```

Run each agent 2-3 times to gauge difficulty. See [Testing Agent Performance](#) for guidance.

4. Submit

 Before submitting: The rubric must be set up via the platform UI. The CLI does not include a rubric step. Navigate to the Experts platform, open your task, and complete the rubric configuration.

BASH Copy

```
stb submissions create ./my-task-name -p PROJECT_ID --time MINUTES
```

Use `--time` to specify time spent in minutes (e.g., `--time 120` for 2 hours).

The CLI automatically:

- Zips your task folder
- Uploads to the platform
- Runs automated checks
- Creates a submission record

5. Check submission status

To check the status of your tasks (which submissions you've made and what state they're in), list every submission you've made for a project:

BASH

 Copy

```
stb submissions list -p PROJECT_ID
```

Add `--show-folder-names` to also see the local task folder name each submission came from (slower):

BASH

 Copy

```
stb submissions list -p PROJECT_ID --show-folder-names
```

Submission status reference:

STATUS	MEANING	CAN UPDATE?
<code>EVALUATION_PENDING</code>	Automated checks running	No
<code>NEEDS_REVISION</code>	Reviewer requested changes	Yes ✓
<code>REVIEW_PENDING</code>	Waiting for a human reviewer	No
<code>ACCEPTED</code>	Task accepted	No
<code>OFFERED</code>	Offer made	No

STATUS	MEANING	CAN UPDATE?
REJECTED	Task rejected	No
SKIPPED	Task skipped	No

Drill into a specific submission:

BASH Copy

```
# Open in the browser
stb submissions view SUBMISSION_ID

# Download the submitted task files
stb submissions download SUBMISSION_ID

# Download the latest reviewer / automated feedback
stb submissions feedback SUBMISSION_ID
```

Feedback typically includes:

- Agent-generated quality and difficulty check results
- Notes from expert reviewers

6. Iterate on Feedback

Read any feedback carefully and either revise your submission accordingly or provide a rebuttal note when updating.

Update when in **NEEDS_REVISION** state:

BASH Copy

```
stb submissions update ./my-task-name -s SUBMISSION_ID --time MINUT
```

Use `--time` to specify time spent in minutes (e.g., `--time 60` for 1 hour).

If the submission was created using the CLI, you can omit the submission ID:

BASH Copy

```
stb submissions update ./my-task-name --time MINUTES
```

Control reviewer notification: By default, submissions are sent to reviewers after evaluation passes. To skip this:

BASH Copy

```
stb submissions update ./my-task-name --time MINUTES --no-send-to-r
```

Task Review Workflow

Overview

 Copy

```
1. Get Assignment → 2. Download → 3. Review → 4. Make Decisio
```

1. Get Review Assignment

BASH Copy

```
stb reviews get -p PROJECT_ID
```

Fetches your current review or requests a new assignment.

List your review assignments:

BASH

 Copy

```
stb reviews list -p PROJECT_ID
```

2. Download Submission

BASH

 Copy

```
stb reviews download REVIEW_ID
```

Downloads and extracts the submission to your local machine.

View feedback:

BASH

 Copy

```
stb reviews feedback REVIEW_ID
```

Open in browser (optional):

BASH

 Copy

```
stb reviews view REVIEW_ID
```

3. Review the Task

Test and evaluate using the guidelines in [Review Guidelines](#) and [Reviewer Training](#).

4. Make Decision

Accept:

BASH

 Copy

```
stb reviews accept REVIEW_ID --time MINUTES
```

Optional: Add notes with `-n` or `--notes`:

BASH Copy

```
stb reviews accept REVIEW_ID --time MINUTES -n "Optional acceptance
```

Request revision:

BASH Copy

```
stb reviews revise REVIEW_ID --notes "Specific issues to address" -
```

Both commands require:

- `--time` or `-t`: Time spent in minutes (e.g., `--time 45` for 45 minutes)
- `--notes` or `-n`: Required for revisions, optional for acceptance

Skip (if not qualified to review):

BASH Copy

```
stb reviews skip REVIEW_ID --reason REASON --rationale "Explanation
```

Valid skip reasons: `outside_expertise`, `unclear_or_ambiguous`,
`too_time_consuming`, `invalid_input`, `other`

Task Adjudication Workflow

Overview

 Copy

1. Get Assignment → 2. Download → 3. Adjudicate → 4. Make Dec

1. Get Adjudication Assignment

BASH

 Copy

```
stb adjudications get -p PROJECT_ID
```

Fetches your current adjudication assignment or requests a new one.

List your adjudication assignments:

BASH

 Copy

```
stb adjudications list -p PROJECT_ID
```

2. Download Submission

BASH

 Copy

```
stb adjudications download ADJUDICATION_ID
```

Downloads the submission file, submission payload, and review payloads.

View feedback:

BASH

 Copy

```
stb adjudications feedback ADJUDICATION_ID
```

Open in browser (optional):

BASH

 Copy

```
stb adjudications view ADJUDICATION_ID
```

3. Adjudicate the Task

Review the submission along with the previous review feedback. Test and evaluate using the guidelines in [Review Guidelines](#) and [Reviewer Training](#).

4. Make Decision

Accept:

BASH

 Copy

```
stb adjudications accept ADJUDICATION_ID --time MINUTES
```

Optional: Add notes with `-n` or `--notes`:

BASH

 Copy

```
stb adjudications accept ADJUDICATION_ID --time MINUTES -n "Explana
```

Request revision:

BASH

 Copy

```
stb adjudications revise ADJUDICATION_ID --notes "Specific issues t
```

Both commands require:

- `--time` or `-t`: Time spent in minutes (e.g., `--time 30` for 30 minutes)
- `--notes` or `-n`: Required for revisions, optional for acceptance

Skip (if not qualified to adjudicate):

BASH

 Copy

```
stb adjudications skip ADJUDICATION_ID --reason REASON --rationale
```

Valid skip reasons: `outside_expertise`, `unclear_or_ambiguous`,
`too_time_consuming`, `invalid_input`, `other`

Additional Commands

Claude Code Integration

Run Claude Code for interactive development:

BASH

 Copy

```
stb claude
```

This launches Claude Code with pre-configured AI credentials from the platform.

Troubleshooting

"This folder has already been submitted"

Use `stb submissions update` instead of `create`.

"Cannot update: submission is in X state"

You can only update submissions in `NEEDS_REVISION` state. Check with `stb submissions list`.

Docker Issues

1. Ensure Docker Desktop is running
2. On macOS: Enable **"Allow the default Docker socket to be used"** in Docker Advanced Settings

See [Troubleshooting Guide](#) for more issues.

Note: Windows is not supported.

API Key Issues

Run `stb login` to re-authenticate.

"Maximum refresh limit (3)" Error

If you see `Bad Request: Maximum refresh limit (3)` when running `stb keys refresh`, you've exceeded the retry limit for AI credential requests. Contact an admin to reset your key refresh limit, then run `stb keys refresh` again.

Model Warnings (Safe to Ignore)

 Copy

```
Failed to retrieve model info for '@anthropic/claude-opus-4-8'...
```

This is a known harmless warning that can be safely ignored. Your testing will work fine.

Upgrading

The CLI checks for updates hourly. When available, you'll see:

⚠ Update available: 2.0.2 → 2.1.0 (Versions shown for illustration purposes only)

Run the following command to upgrade:

BASH

 Copy

```
uv tool upgrade snorkelai-stb --find-links https://snorkel-python-w
```

Your config and credentials are preserved.

Uninstallation

Uninstall CLI

BASH

 Copy

```
uv tool uninstall snorkelai-stb
```

Remove Configuration (Optional)

BASH

 Copy

```
rm -rf ~/.config/stb/
```

Note: Windows is not supported.

Next Steps

- **New to Terminal-Bench?** Read [What Makes a Good Task](#)
- **Ready to create?** See [Task Components](#) and [Platform Submission Guide](#)
- **Before submitting:** Review the [Submission Checklist](#)
- **Need help?** Check the [FAQ](#) or ask in Slack
