Video: Running Your Task

Learn how to interact with your task environment and test your solution locally.

Video Tutorial

Running Your Task

0.8× 1× **1.2×** 1.5× 1.7× 2× 2.5×

11 min ⚡ 9 min 15 sec

What You'll Learn

- How to start your task container in interactive mode
- Navigating the task environment
- Testing commands before adding them to your solution
- Debugging environment issues

Key Commands

Start Interactive Mode

BASH

 Copy

```
harbor tasks start-env -p <task-folder> -i
```

Inside the Container

Once inside, you can:

- Navigate the filesystem
- Run your solution commands
- Test that everything works as expected
- Debug any issues

Exit the Container

BASH

 Copy

```
exit
```

Tips

1. **Test everything manually first** — Run each command of your solution inside the container before writing `solve.sh`
2. **Check file paths** — Verify that all paths in `instruction.md` exist
3. **Verify dependencies** — Make sure all required packages are installed
4. **Note exact commands** — Copy the working commands for your solution file

Common Issues

PROBLEM	SOLUTION
Container won't start	Check Docker is running
Permission denied	Run Docker Desktop with admin rights
Missing packages	Add to environment/Dockerfile and rebuild
Wrong working directory	Check WORKDIR in environment/Dockerfile
